# Mohammed Taher

Data Engineer

mohdtaher7219@gmail.com
+91 83903 00680

Data Engineer who turns data into measurable business improvements. Spearheaded the creation of a data warehouse that improved processing time by **35%**. Implemented ELT processes in Python and SQL that reduced data redundancy by **40%**. Has led cross-functional teams of up to 15, delivering on time and within budget.

## SKILLS

| | |
|---|---|
| **Languages** | SQL, Python, Jinja |
| **Data Tools** | dbt (Data Build Tool), dbt Cloud, dbt Mesh |
| **Platforms** | Snowflake, Azure Databricks, Microsoft Fabric, AWS, Azure Data Factory, Power BI |
| **Version Control** | Git, GitHub |
| **Concepts** | ELT, Medallion Architecture, Incremental Modeling, Dimensional Modeling, Star Schema, Data Quality & Testing, CTEs, Window Functions, Data Lineage, CI/CD |
| **Expertise** | Predictive Modeling · Data Pipeline Development & Automation · Data Quality & Consistency · Cross-functional Collaboration |

## EXPERIENCE

**Data Engineer** — Softpredict Technologies Pvt. Ltd. Jun 2024 – Present

- Built and maintained ELT pipelines with dbt and Snowflake, transforming raw data from 8+ nonprofit fundraising platforms into analytics-ready datasets.
- Implemented layered models on the medallion architecture (Raw → Staging → Intermediate → Mart → Exposure) for clean data flow and clear separation of transformation logic.
- Contributed reusable macros to a shared dbt Mesh platform package, standardizing transformation logic across multiple client projects.
- Delivered mart and exposure models to Power BI, HubSpot and Hightouch to power fundraising analytics and marketing automation.
- Used Git and GitHub with pull-request workflows and CI/CD pipelines to ensure tested, safe production deployments.

**Data Science Intern** — Infosys Springboard Sep 2023 – Dec 2023

- Conducted exploratory and statistical analysis on healthcare datasets, identifying key risk factors and trends relevant to pharmaceutical commercialization.
- Built and deployed real-time stroke-risk prediction models achieving 90% accuracy, supporting client decision-making in healthcare delivery.
- Supported workflow improvements through process documentation, contributing to successful project execution.

## PROJECTS

**Athena dbt Mesh Platform** dbt · Snowflake · SQL · Jinja · GitHub · CI/CD

- Contributed to a two-repo dbt Mesh architecture: a shared platform package of reusable macros and a client project applying business logic across 5 transformation layers.
- Wrote SQL models with CTEs and Jinja templating, maintained schema.yml tests, and followed CI/CD pull-request standards for production-safe deployments.
- Delivered curated datasets to Power BI dashboards and HubSpot audiences for nonprofit fundraising teams.

**Azure Data Engineering & Analytics Platform** ADF · ADLS Gen2 · Databricks · PySpark · SQL · Power BI

- Built data pipelines from CGDC, SharePoint, CSV and Excel sources using ADF and ADLS Gen2.
- Transformed and validated data with Databricks/PySpark across Bronze, Silver and Gold layers.
- Monitored pipelines, resolved data issues, and delivered curated datasets for Power BI dashboards.

## EDUCATION

**B.Tech, Computer Science** 2020 – 2024
Dr. Babasaheb Ambedkar Technological University

**HSC, Mathematics** 2018 – 2020
Heritage Junior College

## CERTIFICATIONS

- AWS Certified Data Engineer
- Data Loading — Snowflake
- Python Programming — Infosys
- Generative AI for Data Analysis — Meta
- Master n8n — Udemy
- Fabric Data Engineer
- Databricks SQL — Udemy
- Data Analysis with Python — IBM
- Master Power BI — iNeuron
